CHALLENGE

What problem are we solving?

Information Overload

Text files (.txt, .pdf) frequently contain excessive words and formatting hurdles. Our product knows how to bypass those challenges and extract the unabridged content from documents, organizing their content into 5 main points.

Time Constraints

Reviewing hours of lecture notes is tedious and inefficient. Sitting is also the new smoking. Our product shortens all kinds of notes into an easy to understand format that can be used on the go (by playing audio).

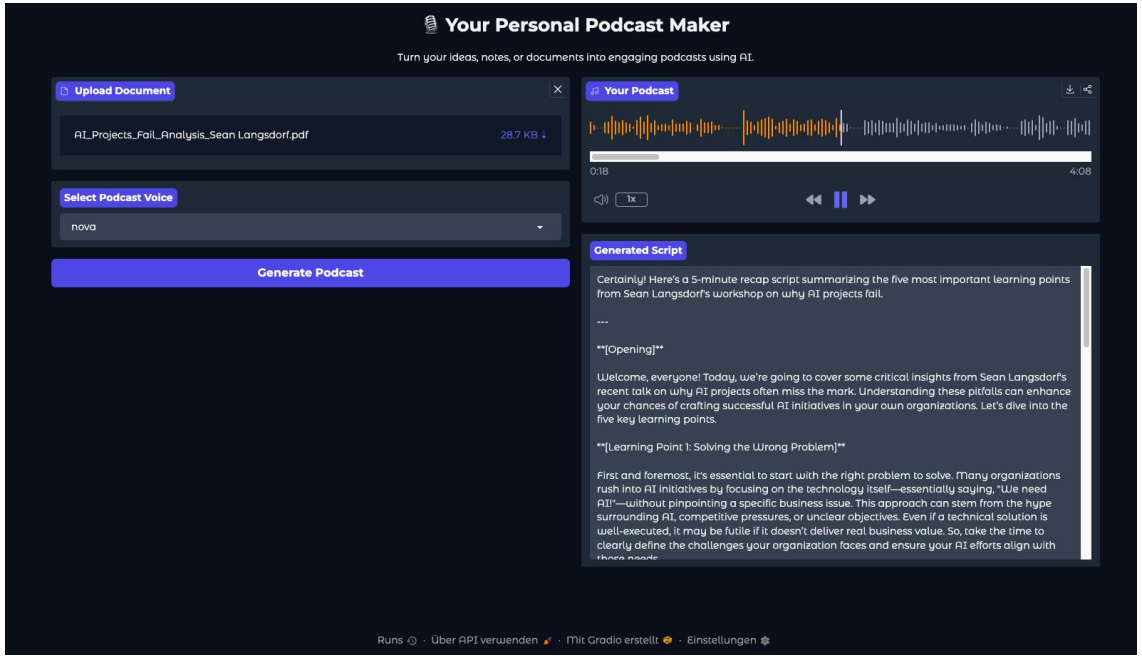

Low Retention

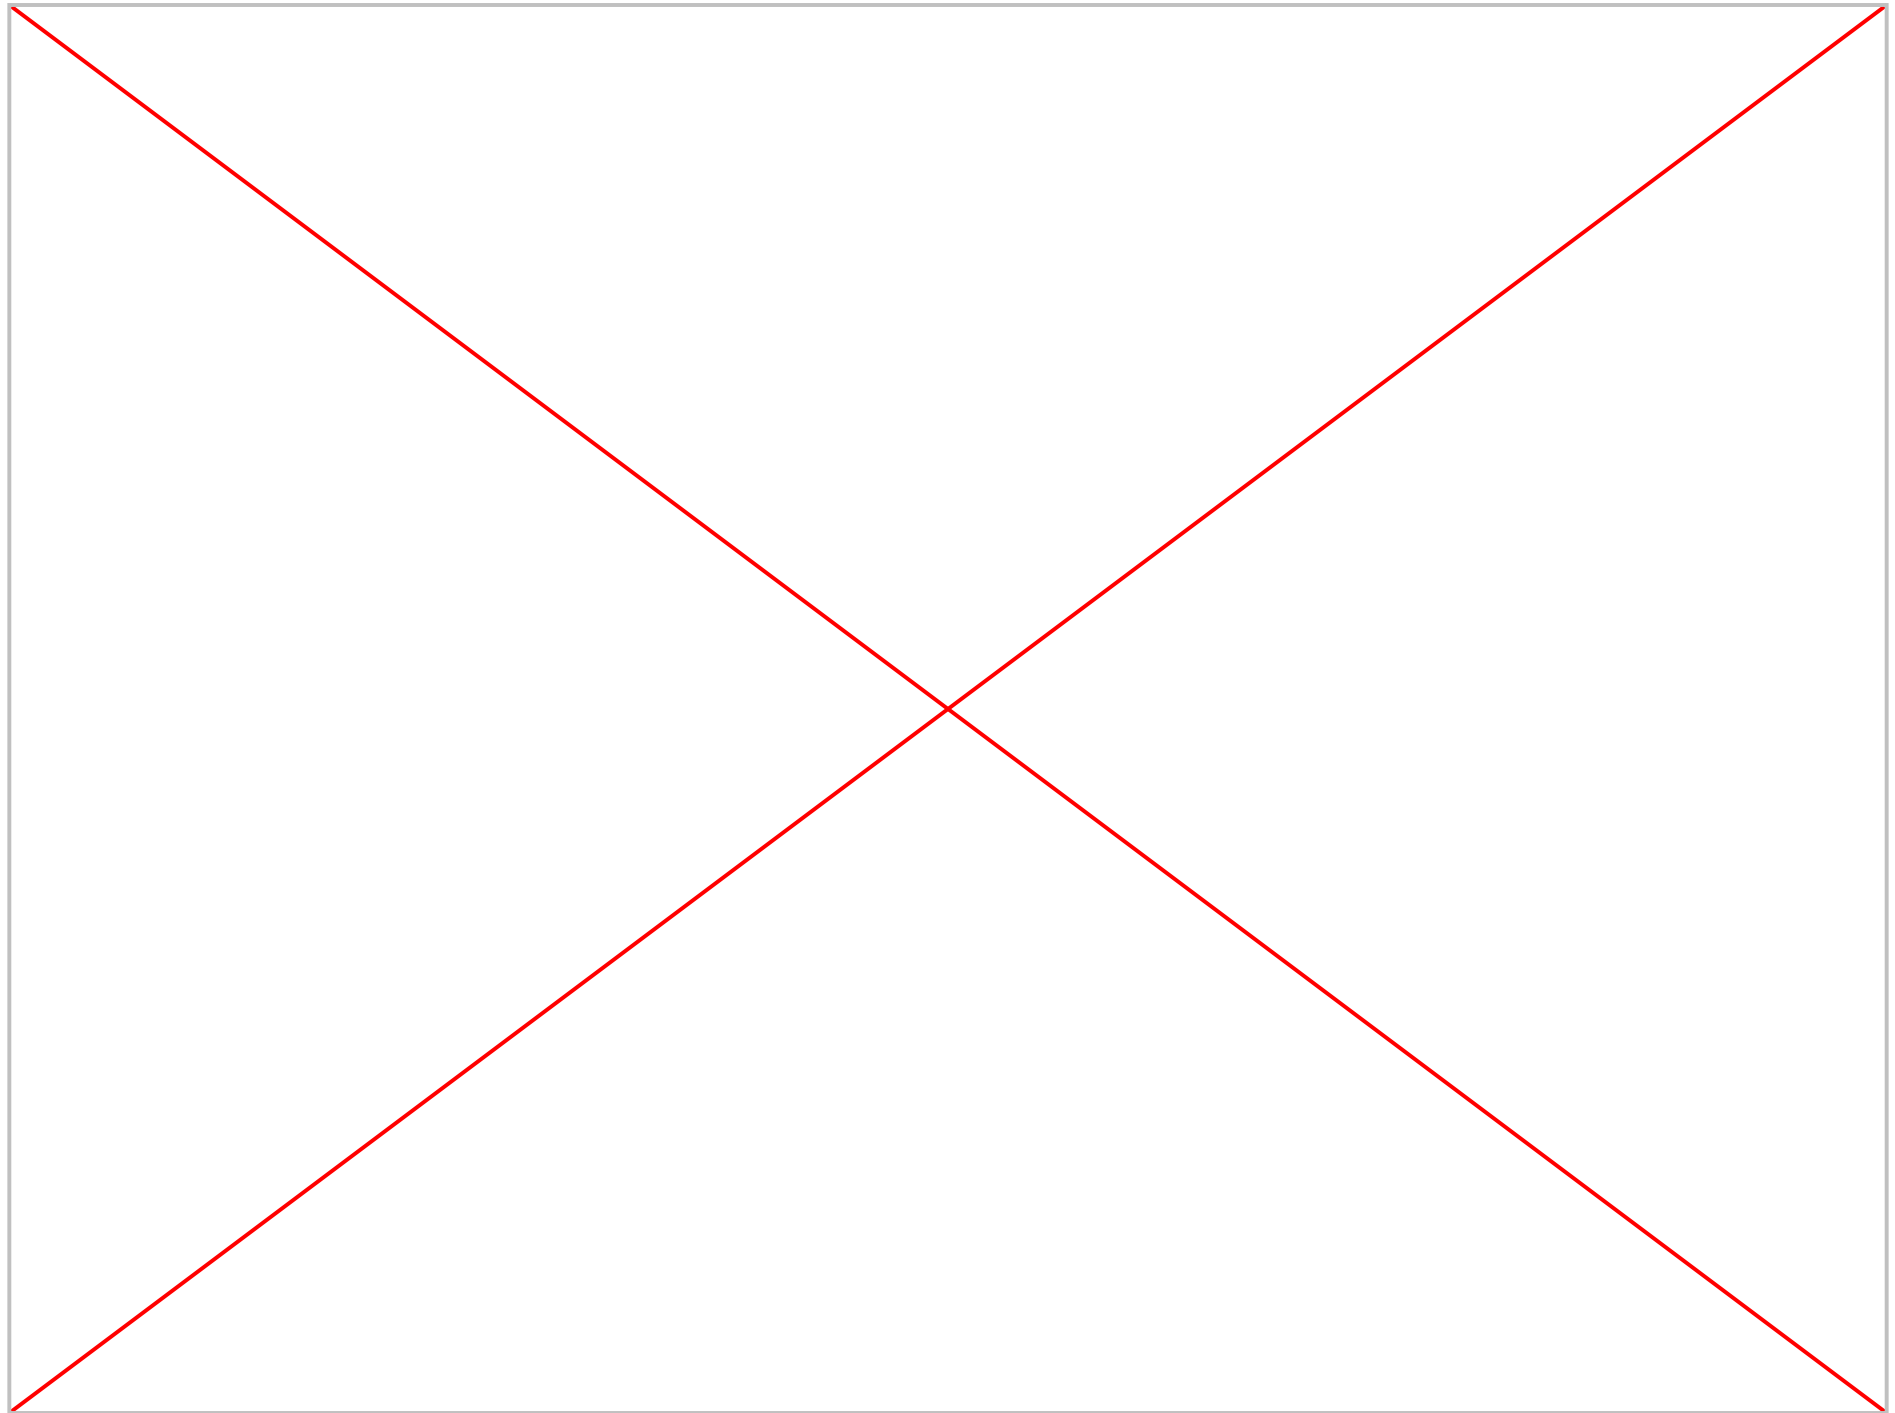

Core learning points often get lost inside long, dense, jargon-filled documents. Our product transforms the contents of those documents into an engaging and fun podcast format.

SOLUTION

Automated Audio Recaps

1. **Instant Document Ingestion**
   Upload raw .txt or .pdf files seamlessly.
2. **AI Script Generation**
   OpenAI LLM extracts top 5 key takeaways.
3. **Natural Text-to-Speech**
   Converts script into a human-sounding .mp3 podcast.

SUMMARY

Key Takeaways from the Project

Teamwork across GitHub branches

Managing version control and maintaining effective collaboration across the team. Team members from diverse technical backgrounds developed new technical skills through hands-on experience with the project.

Scoping of the product

Flexibility of the LLM in determining the product. Creative process of deciding what goes into the MVP and how we agree on the product vision.

Project delivery

Make a recording of the demo rather than running it live. Usefulness of the README.md file and the requirements.txt.
